CAMELLIAS

Single

Definition of Classification Types

Single

A flower having one row of not more than eight petals, which can be regular, irregular or loosely arranged about a central, conspicuous stamen cluster, with or without petaloids.

Note: NOT more than eight petals but petaloids allowed.
E.g. 'Spencer's Pink'.

Semi-Double

Semi-Double

A flower having in excess of eight petals in two or more rows, with a conspicuous stamen cluster, with or without petaloids.

Note: Petaloids allowed but must have a conspicuous stamen cluster. E.g. 'The Czar'.

Anemone

Anemone Form (previously called Elegans Form)

A flower having one or more outer rows of large petals, while the stamens have become almost totally petaloid and form a convex mass in the centre. E.g. 'Elegans', 'Brushfield's Yellow'.

Peony Form

Peony Form (also known as Informal Double)

A flower having either of two forms as follows:

(a) Loose or Incomplete Informal Double, with loosely arranged petals, usually irregular or wavy, becoming smaller to the centre where they are divided by stamens. Sometimes the centre is a mixture of small petals, petaloids and stamens. E.g. 'Easter Morn'

(b) Full or Complete Informal Double, usually a convex mass of a mixture of irregular, twisted petals and petaloids, with stamens, if any, obscured. E.g. 'Debutante'.

Rose Form Double

Rose Form Double

A flower having multiple rows of imbricated petals, opening through a bud-shaped centre to show some stamens in a concave centre when fully open. E.g. 'Helenor'.

(Perhaps best described as a Formal Double showing stamens.)

Formal Double

Formal Double

A flower having many rows of regular, overlapping petals and no visible stamens, the petals being arranged in one of four different ways, viz. fully imbricated, tiered, spiral or bud centred. E.g. 'Nuccio's Gem'.
